BHUPALI CHIPLUNKAR

Engineering Manager | Data Ingestion, Connector Platforms & Reliability

Bengaluru, India | +91 9769623639 | bhupali.chiplunkar@gmail.com

LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Engineering Manager with **11+ years of experience** leading data ingestion platforms and engineering organizations of up to **27+ engineers**. Reduced connector development from **approximately one month to two days**, improved data availability from **65% to 99.8%**, and cut ingestion-related incidents by **60%**. Experienced in distributed systems, enterprise connectors, cloud-based services, and developing engineering leaders.

TECHNICAL SKILLS & LEADERSHIP

Data & ingestion: Enterprise API connectors, ETL, YAML-defined APIs, authentication adapters, workflow orchestration, retries/backfills, data observability, freshness and correctness

Cloud & engineering: GCP, Kubernetes, Airflow, PostgreSQL, ClickHouse, Redis, BigQuery, Spanner, Ruby on Rails, Python, TypeScript, Node.js, React, React Native, FastAPI, SQL

Engineering leadership & operations: Distributed systems, technical strategy, PM and customer partnership, organizational design, hiring, coaching, succession, SLOs, incident response, CI/CD, SOC 2

PROFESSIONAL EXPERIENCE

Independent AI Products | Founder & Engineering Lead

Apr 2026 - Present

- Built and operate **Raesic** (app.raesic.co), a Gemini-powered AI wardrobe application with structured extraction, schema validation, SKU deduplication, rate limiting and automated content moderation (FastAPI, PostgreSQL, Redis); processed **500+ items** in early testing.
- Built **FutureMe**, a resume assistant using multi-step LLM workflows, Zod-validated outputs and pgvector semantic matching (NestJS, Supabase, LangChain).

Clarisights | Engineering Manager

Mar 2024 - Mar 2026

*Led **12 direct reports** across Integrations, Product Engineering, Design and SDET; owned external API ingestion, backfills, reporting APIs and deployments supporting **10,000+ daily jobs** and **~200–250 ingestion workers**. Partnered with Product Management, Austria-based engineers, Germany-based leadership and Customer Success, and US/European customers.*

- Reduced connector implementation time from **~1 month to ~2 days** for supported types by defining a reusable framework and shared contracts for authentication, field mapping, YAML-defined APIs and backend-driven UI; reserved custom code for complex pagination, nonstandard authentication and source-specific transformations. Enabled **~10 new integrations**.
- Consolidated scheduling for **40+ integrations** onto a durable workflow orchestrator, reducing redundant API calls, rate-limit violations, and stalled ingestion jobs while improving recovery and failure visibility.
- Built a technical leadership layer in a previously flat organization by developing and appointing **two Tech Leads**, establishing domain ownership and growth paths, and preparing a successor who assumed Engineering Manager responsibilities.
- Improved 9 AM data availability from **65% to 99.8%** and cut mean time to detect failures from **approximately four hours to under 15 minutes** by directing a four-month data observability program with automated failure classification, correctness checks, and SLA alerts.
- Reduced data-reliability incidents **60%**, customer escalations **35%** and MTTR **40%** after identifying systemic ETL failures through churn analysis, customer discussions and on-call investigations; secured leadership buy-in to prioritize reliability, automated recovery and self-service remediation over new connectors, helping stabilize enterprise retention and support upselling.
- Modernized data processing by coordinating the phased migration of all advertising integrations (**~70% of channels**) using identifier validation and dual-write safeguards; separately led rollout and observability of direct warehouse writes, reducing reporting freshness lag from **15–30 minutes to approximately five minutes**.
- Expanded enterprise analytics capabilities by defining engineering strategy and leading a reporting-table revamp that enabled creative performance reporting and configurable custom metrics, reducing report-specific metric duplication by **30%**.

ShareChat / Moj | Engineering Manager, Virtual Gifting & Wallet Systems — Mar 2023 - Mar 2024

*Led **~25 engineers across 6–7 pods** spanning Payments, Virtual Gifting, Web and React Native; managed through four Tech Leads and an Associate Engineering Manager, across production monetization systems.*

- Directed platform delivery and production reliability for virtual gifting, wallets and real-time transactions supporting **INR 1 crore+ in daily GMV**.
- Expanded monetization through a self-service Payments SDK that let product teams configure SKUs and transact without recurring payments-team involvement, enabling **INR 10–30 lakh in incremental monthly revenue** across gifting, post boosting and chatrooms.
- Reorganized **6–7 engineering pods** following restructuring, clarifying ownership across platform and client technologies, streamlining incoming requests, and aligning product and technical roadmaps with Product leadership.
- Established **weekly release management** and production-resiliency practices for a remote engineering organization, introducing alerting, monitoring and KPI reviews for gifting, wallet and livestreaming experiences.
- Led performance reviews, calibrations and leadership development across the organization while balancing urgent livestream work with cross-team initiatives during post-layoff capacity changes.

ShareChat / Moj | Engineering Lead, Payments, Chatrooms & Livestreaming — Oct 2021 - Mar 2023

- Led up to **27+ engineers** across React Native and web, improving payment funnel conversion from **10% to 60%** while achieving **95% payment success** through iterative purchase-flow changes and A/B experimentation.
- Drove a unified payments platform that reduced transaction commission rates from **approximately 30% to 2%** across consumer monetization journeys.
- Built the React Native hiring pipeline and interview process; hired **approximately 15–16 engineers** and developed an early-career engineer into a Tech Lead. Contributed to **20+ engineering hires** across ShareChat and Clarisights.
- Coordinated weekly web and mobile releases and production reliability across high-concurrency livestreaming and gifting experiences.

ShareChat / Moj | SDE-2, Chatrooms & Livestreaming — May 2020 - Oct 2021

- Established the organization's React Native foundation as its **first React Native engineer**, designing the initial hybrid application architecture and enabling rollout to **approximately 2 million users**.
- Built virtual gifting with a dual-wallet system and introduced CodePush over-the-air deployments, reducing mobile release rollout time from **approximately two months to two days**.

BookMyShow | SDE-2, Web Platform — 2019 - 2020

- Led a three-engineer web platform pod, reducing server errors by **94%** and JavaScript bundle size by **20%** through production reliability and performance improvements.
- Delivered PhonePe integration, OTP-based login, and desktop support for the progressive web application.

Earlier Engineering Roles — 2015 - 2019

PSTakeCare (healthcare discovery and BI); Greyatom (live coding platform and gRPC); Indiez (0-to-1 MVPs); Indus Valley Partners (hedge-fund workflow software).

EDUCATION

Master of Computer Applications | Sardar Patel Institute of Technology, Mumbai | 2015

Bachelor of Computer Applications | Dr. BMN College (SNDT), Mumbai | 2012 | University Rank 5
