

BHUPALI CHIPLUNKAR

Engineering Manager | Payments, Data Platforms & Applied AI | Fullstack and Backend at Scale

+91 9769623639 | bhupali.chiplunkar@gmail.com | [LinkedIn](#) | [GitHub](#) | Bengaluru, India.

SUMMARY

Engineering Manager with 11+ years, grown from fullstack IC to leading orgs of **12 to 27+ engineers** across payments and data platforms. I stay close to the technical work while building teams that outlast me.

- **Systems at scale:** Payments SDK and wallets at **1Cr+ daily GMV**; unified payments cut commission **~30% to ~2%**; reliability program cut data incidents **60%**, halved MTTR.
- **People and hiring:** **20+ hires**; **co-authored hiring playbooks**; **grew people at every level, from engineers into Tech Leads and an EM.**
- **Delivery and rigor:** SLOs, on-call, and incident practices across pods; still hands-on, with two self-built AI products in production (FastAPI, NestJS, GCP).

PROFESSIONAL EXPERIENCE

Independent AI Products

Bengaluru, India

Founder & Engineering Lead

Apr 2026 - Present

Designed and shipped two LLM products end to end, solo.

- **Raesic ([app.raesic.co](#))**, live AI wardrobe app. **Gemini extraction pipeline on FastAPI/Postgres/Redis: schema validation per response, deterministic promo-filtering, synthetic SKU fingerprints for deduplication.**
- **FutureMe**, resume-building assistant. Multi-step LLM workflows with Zod-validated outputs, Gemini embeddings and pgvector semantic matching, multi-turn chat (NestJS, Supabase, LangChain).

Stack: Python, FastAPI, TypeScript, NestJS, PostgreSQL, pgvector, Redis, Gemini API, LangChain, GCP (Cloud Run, GCS), Supabase, SendGrid, Alembic, pytest

Clarisights

Bengaluru, India

Engineering Manager (sole engineering leader, reporting to CTO)

Mar 2024 - Mar 2026

Multi-tenant analytics platform: **30 enterprise customers, 40 integrations, 3B+ writes/day**. Led a **12-engineer** distributed team across backend, full-stack, and data.

- **Took on a churn mandate from the CTO** ("we have a leaky bucket," no spec): interviewed churned-account CSMs, went secondary on-call for a week, found numbers untrustworthy **30-35%** of the time. Defined the error taxonomy; led product fixes surfacing ETL errors, live-fetch previews, and a data-source health module.
- **Results: data-reliability incidents down 60%, MTTR from 48-72 hours to 12-24 hours, QA and CS escalations down 35%, solutions engineering attrition to zero, renewals and upsells up 50% YoY (~\$1M NRR).**
- Cut new integration time from **~3 weeks to ~2 days** by architecting a SQL-based connector framework; drove API migrations across Google and Meta ad platforms.
- Drove a year-long AI-assisted development rollout (Cursor for legacy comprehension, then bounded code generation with human-written test/perf validation): **~15% less development time**, no quality regressions.
- Established incident discipline (SEV process, on-call, 5-Whys RCAs). Migrated authentication from session to cookie-based, hands-on, zero incidents.
- Increased pilot-to-paid conversion **15% YoY** by building self-serve onboarding: DIY connector flows, report templating and duplication.
- Shaped org structure and owned the hiring plan; set multi-quarter direction with no product manager in place.
- After a 6-month feature missed on adoption, made customer validation mandatory before large builds (mockups reviewed in monthly customer calls).
- Spearheaded SOC 2 and ISO compliance execution from the engineering side.
- Managed 2 Tech Leads directly; hired **5-6 engineers** and calibrated **~12** across three verticals.

Platform: Ruby on Rails, ClickHouse, PostgreSQL, Redis, React, Airflow, GCP, Kubernetes

ShareChat / Moj

Bengaluru, India

3 yrs 11 mos, SDE-2 to Engineering Manager. Monetization systems serving **30M+ users** on one of India's largest social platforms (**150M+ MAU**).

Engineering Manager, Virtual Gifting & Wallet Systems

Mar 2023 - Mar 2024

- Led a **25-member team** owning core monetization (virtual gifting, wallets, real-time transactions) at **1Cr+ daily GMV**. An EM reported in for the final 8 months.
- Shaped RN org design end to end: stood up the function from scratch, split/merged pods, restructured through a downsizing. Co-set the multi-quarter roadmap with Product.

- Owned the Payments SDK as self-serve rails: any team could list SKUs and transact with no payments-team involvement, enabling **₹10-30L/month** in incremental monetization. Powered gifting, post boosting, and chatroom monetization, including products launched post-exit.
- Handled appraisals and calibrations; instituted release management and resiliency practices (alerting, monitoring, KPI tracking) for a fully remote org.

Engineering Lead, Payments, Chatrooms & Livestreaming

Oct 2021 - Mar 2023

- Led **27+ engineers** across React Native and Web on payments and consumer journeys; improved conversion to **60%** and success rate to **85%**.
- Drove a unified payments system that cut commission fees from **about 30% to about 2%** per transaction.
- Owned real-time reliability for livestreaming and gifting under high-concurrency spike load.
- Resolved an RN-vs-native standoff at the iOS gifting launch with performance data and clear use-case boundaries; launch shipped on schedule.
- Established the RN hiring pipeline from scratch: defined roles and rounds, hired **15-16 engineers**, co-authored hiring playbooks, ran bar-raiser rounds.
- Grew a fresher into a Tech Lead over five years through graduated ownership, up to solely standing up the Moj React Native repository.

SDE-2, Chatrooms & Livestreaming

May 2020 - Oct 2021

- First RN engineer in the org; proposed the architecture and laid the foundation for hybrid rollout to **~2M users**.
- Built virtual gifting with a dual-wallet system; enabled OTA releases via CodePush, cutting rollout from **~2 months to 2 days**.

Stack: Node.js, TypeScript, React/React Native, GCP, Spanner, BigQuery, Redis, Jenkins, Airflow | Grafana, Kibana, Sentry, Stackdriver

BookMyShow

Mumbai, India

SDE-2, Web Platform

2019 - 2020

- Headed the web platform pod (3 engineers) for one of India's highest-traffic entertainment sites: cut **server errors 94%** and **bundle size 20%**, launched PhonePe integration and OTP login, scaled the PWA to desktop.

Stack: React.js, Node.js (Express), TypeScript, SSR, Webpack, Jmeter

Early Career

2015 - 2019

- Greyatom: live coding platform, gRPC, **frontend size down about 75%**.
- Indiez: two 0-to-1 MVPs for external clients.
- PSTakeCare: healthcare discovery, SEO, BI systems.
- Indus Valley Partners: IVP Karma, hedge-fund workflow platform with email-driven task automation.

Stack: React, Angular, Node.js, JavaScript, Webpack, Yarn workspaces, MSSQL, C#

KEY COMPETENCIES

Languages & Frameworks: Node.js, TypeScript, React/React Native, Python, FastAPI, NestJS, Ruby on Rails

Data & AI: PostgreSQL, pgvector, ClickHouse, Redis, Airflow, LLM pipelines, embeddings, Gemini API, LangChain

Cloud & Infrastructure: GCP (Cloud Run), Kubernetes, Spanner, BigQuery, CI/CD (Jenkins)

Practices & Tooling: SLOs, observability, incident response, Grafana, Sentry, Kibana, Stackdriver, Metabase, Opsgenie, Git, Jira

Leadership & Domain: Org design, hiring, leadership development, reliability engineering, roadmaps, CXO communication

EDUCATION

Master of Computer Applications, Sardar Patel Institute of Technology, Mumbai

2015

Bachelor of Computer Applications, Dr. BMN College (SNDT), Mumbai, University Rank 5

2012
